75MPH Wind Adaptor Kit™

When the **Key West Housing Authority** was looking for a vinyl fence, the only fence company they chose to accommodate their rigorous hurricane demands was **Illusions Vinyl Fence®**

The request was for an **8' high by 8' wide** vinyl fence that could handle hurricane force winds. By using the correctly installed V300-8 Illusions Privacy Fence with the **75MPH Wind Illusions Vinyl Fence Certified Adaptor Kit™**, their fence is now capable of withstanding sustained 75MPH winds.

One Housing Authority Employee stated that "the neighbors love the fence because it keeps out the dust and minimizes the noise. The fence

is where we do all our heavy work. My favorite thing about the fence is the clean up. Kids on the other side graffiti it up everyday, but have slowed because all we do is wipe it off."

The installer stated "it was my first time installing this type of fence and it was the easiest project I've ever done. The way the fence sits on the property line, we had to build the last portion with a curved angle. The sections maneuvered very comfortably around that curve in the property."
